1. USAGE OF GENESYS CLOUD

1.1. Information

1.1.1. Genesys Cloud is a web-based softphone application that Secondary Triage Clinicians, Low Acuity Patient Navigators, and Paramedic Specialists use for all phone-related work when in the dispatch environment.

1.1.2. Genesys Cloud is accessible only on specific IDIR network computers.

1.1.3. Single Sign On is enabled so that Genesys accounts are linked to the IDIR account.

1.1.4. Genesys Cloud has 4 environments in which access to these environments is determined by the division the agent is assigned to. The 4 divisions/environments are:

- a.** Production
- b.** Training
- c.** Development
- d.** Testing

1.2. Procedure – Access to Genesys Cloud Production Environment

1.2.1. Access to the Genesys Cloud Production Environment is provisioned to staff upon the creation of their Genesys account by IMITS.

1.2.2. Should staff not be able to access Genesys Cloud, they should escalate to the BCEHS Helpdesk.

2. STAFF EXPECTATIONS AND USAGE OF GENESYS CLOUD

2.1. Information

2.1.1. Genesys Cloud utilizes status coding to indicate the agent's availability and inform the behaviour of the call routing.

2.1.2. Clinical Hub will be using the following statuses within Genesys Cloud:

- a.** On Queue
- b.** Available
- c.** Break
- d.** Away

2.1.3. Within the On Queue status, there are 3 sub-statuses that indicate the agent's presence:

- a.** Idle
- b.** Interacting
- c.** Not Ready

2.1.4. "Not Ready" is the status that Genesys places the agent if they are offered a queue call and do not answer. This will place them into "Not Ready" until they place themselves back onto the queue or change their status to available.

2.2. Equipment

2.2.1. Staff will only use BCEHS provided equipment to access Genesys, including headsets and amplifiers.

2.2.2. Genesys may only be accessed from an IDIR computer located inside of the dispatch environment.

2.3. Procedure – Readiness to Work

2.3.1. Staff are expected to be logged into Genesys from the beginning of their scheduled shift until the conclusion of their shift.

2.3.2. Staff should not log out of Genesys or close Genesys Cloud during their shift.

2.3.3. All staff shall ensure that their device settings are configured at the beginning of their shift to ensure that they are ready to take calls at the beginning of their shift.

2.4. Procedure – Status Management

2.4.1. Staff are responsible for ensuring that their Genesys status accurately reflects their work status.

2.4.2. Staff should be in the “On Queue” status anytime they are available to answer calls.

- a. This status will offer the agent both new queue calls and direct calls to an agent’s DID.

2.4.3. Staff shall use the “Available” status when they are unable to accept new queue calls due to active engagement on existing prioritized work.

- a. This status will prevent the agent from being offered queue calls but allows calls to that agent’s DID or overflow calls to be offered to the agent.

2.4.4. Staff shall use the “Away” status whenever they are leaving their workstation temporarily. This includes obtaining water, washroom breaks, retrieval of kitchen items, or asking a question to their supervisor.

- a. This status will take the agent off queue and make unavailable for incoming DID calls.

2.5. Procedure – End of Duty

2.5.1. Staff shall ensure that they log out of Genesys at the end of their shift, prior to closing the browser or logging off.

- a. If staff do not log out, they will be offered calls and will be put in a Not Ready status.

3. QUEUE USAGE

3.1. Information

3.1.1. The Genesys system contains the various queues and skillsets that allow calls to be routed to the most appropriate staff member.

3.1.2. The Genesys system utilizes voice queues to match the respective inbound phone queues in clinical hub. These include:

- a.** LAPN CH PROD
- b.** STC CH PROD
- c.** PS CH PROD

3.2. Procedure – Selecting Queues

3.2.1. Staff should only activate the queue for their primary role that shift.

3.2.2. Call queues are structured that calls will roll over to other queues when nobody is available to answer. Because of this, staff should not activate other queues when someone else goes on a break or is away from the desk.

4. GENESYS CHAT

4.1. Information

- 4.1.1.** Staff can communicate with other Genesys users via direct messaging or to several staff using the group chat feature.
- 4.1.2.** Genesys Chat may be used for operational communication between frontline staff while on shift.
- 4.1.3.** Genesys chat should not be used for non-operational level communication such as administrative duties or communication with other BCEHS departments.
- 4.1.4.** Chat messages cannot be deleted and are subject to review.

4.2. Procedure – Direct Messaging

- 4.2.1.** Staff may create a chat between themselves and another staff member.
- 4.2.2.** Chats are to always remain professional and in line with the BCEHS respectful workplace policy.
- 4.2.3.** Any communication that relates to an active case/event shall be appropriately documented in the relevant CAD event.

5. INBOUND CALL HANDLING

- 5.1.** All staff shall answer all calls presented to them within a timely fashion prior to the interaction timing out.

6. CALL RECORDINGS

6.1. Information

- 6.1.1.** Genesys Cloud records voice interactions for quality assurance, training, compliance, and investigative purposes, in accordance with organizational policies and applicable legislation.
- 6.1.2.** Access to call recordings is restricted to authorized personnel and is governed by role-based permissions within the system.
- 6.1.3.** Call recordings may be used for quality improvement, performance management, complaint investigations, incident reviews, and operational analysis.

6.1.4. Users granted access to call recordings shall ensure all information obtained from recordings is handled in accordance with privacy, confidentiality, and information security requirements.

6.1.5. Call recordings are retained in accordance with organizational records management policies and system retention settings.

6.1.6. Unauthorized access, use, disclosure, duplication, or distribution of call recordings is prohibited.

6.2. Procedure – Accessing Call Recordings

6.2.1. Authorized users may access call recordings through the approved Genesys Cloud interface or other approved organizational systems.

6.2.2. Frontline staff are only provided to their own call recordings.

6.2.3. Prior to accessing a recording, the user shall ensure the access is required for a legitimate operational, quality assurance, supervisory, training, compliance, or investigative purpose.

6.2.4. Users shall ensure that recordings are only accessed for the minimum duration necessary to complete the required task.

6.2.5. If a required recording cannot be located or accessed, the user shall report the issue to a supervisor or designated technical support resource.

6.2.6. Upon completion of the review, the user shall close the recording session and ensure no unauthorized individuals can view or hear the recorded content.
